

Magnum Software

History

Magnum Software Systems is a privately held corporation which has been selling premium retail solutions since 1984. Since then we have introduced several well received solutions for the small to medium sized retailer. These programs have grown into extremely reliable, efficient and user-friendly Point of Sale systems.

Magnum Software Systems' focus is customer satisfaction through both software development and technical support. We have technical and sales personnel dedicated to supporting your needs as you transition to the program, and during your daily business activities.

With thousands of systems throughout the United States and several countries, WinSale is constantly tested by retailers and has proven to be one of the most flexible systems on the market, allowing you to adapt the program to your business instead of changing your business to suit the software!

With this History and experience you can be assured that we will be your partner in the future!

Winsale Advantage

On the surface all software may look alike, but there is a vast difference when you examine the versatility and ease of use of WinSale compared to the much higher priced competition.

WinSale is Windows driven and very easy to use. There is no need for extensive computer knowledge!

There is practically no limit to the amount of information you can store in WinSale. You can enter and use as little or as much information about your store operations as you wish.

All retailers do not track information the same way. WinSale lets you easily customize your inventory to the way that you do business.

All information in WinSale can be searched, and this information can be printed in a variety of formats to serve the needs of your business, including spreadsheets. *YOU* control the system; the system does not control you!

Hardware Requirements

Hardware:

PC with Windows 7/Vista/XP

512 MB of memory is required 1GB of memory is recommended. (Depending on chosen Operating System.)

1 GB of open hard drive space

Operating System/Networking:

Windows 7/XP

Printer Consideration:

At least one laser or ink jet printer is recommended for reports. A receipt printer is recommended for Point of Sale stations.

Remote Store Communications:

Internet connection with a dedicated Email address for each location. **Note: The Winsale TS version can completely alleviate the need for remote polling.**

Additional Hardware:

WinSale supports most Point of Sale Hardware, including cash drawers, bar code printers and scanners, pole displays, portable hand held inventory devices, credit card readers, etc.
